INTRODUCTION

Shah Token is the start of something big, a change to the cryptocurrency industry.

ST Coin is meant to be beyond any regular decentralized token, it's meant to be used as a general currency to consumers and retailers. Many tokens fail to realize that their token will not have any value if the public is not using them to purchase or sell products of any kind. The goal of ST Coin is to get rid of large processing fees that come along with credit cards and other hidden charges and only pay gas fees for the blockchain that are very minuscule with cryptocurrency.

While starting small, ST Coin has already made massive leaps into the Crypto industry compared to any other current tokens, including the most popular coins such as: Bitcoin, Litecoin, and many more. However, ST Coin's purpose is not to only compete with other cryptocurrencies, it is also to compete against governmental currencies which is part of the reason for Shah Token's rapid success.

THEN WHY DECENTRALIZATION?

If ST coin started as a centralized coin, it would have defeated the entire purpose of ST Coin. The main purpose of the Shah Token coin is to avoid being regulated by government(s) and to be regulated by the people. Having a community-based currency is highly important for the success of the Shah Token Coin where no inflation of some kind can occur. The amount of ST Coins in existence is fixed giving actual value to the coin which is what basic currency is based on.

ST Coin does not have a burner because it gives the public a chance to own some tokens and be able to use them rather than just holding only for an asset that will just become meaningless because nothing can be done with the token.

OUR BACKGROUND.

“We are here to make a currency that changes the worlds way of purchasing for the people, because it’s by the people.” – ST Coin Team

We want to make something special from the get-go, to create a cryptocurrency that makes a change to the world’s economy, that is our goal. Shah Token has been rapidly expanding to other platforms for people to have access to. Every day the ST coin team continues to seek ways to improve the experience of Shah Token for the public. ST Coin is in the process of creating its very own swap where it would eliminate the need for people to go through other coin-exchange-sites that could be a costly expense and time-consuming. The ST Coin team also has many other projects coming soon which will help create a substantial impact for the ST Coin worth, ST Coin community, and the entire crypto industry.
